The Enroll 2.5 Product Release is Here!

SchoolMint Enroll

Enroll 2.5 has arrived!

SchoolMint Enroll Updates

We've heard your feedback and are excited to announce the latest improvements to Enroll with the 2.5 product release, including a much-requested feature to link applications and registrations. Read on to learn more!

What's new?

Application and Registration Linking

If your enrollment lifecycle moves students from Application to Lottery to Registration, you can now track a student's progression through these processes in the Applications module, and most importantly, filter for which students have a `Not Started` registration!

We are introducing several new features in support of application and registration linking, including:

- In the Applications module:
    - Filter for "Not Started" registrations
    - Select registration fields in Saved Views
- In the Registrations module:
    - Flag indicating associated application status has changed
    - Select application fields in Saved Views
    - View the accepted application Program Name on the registration

Registration:

☐ Not Started

Application and Registration Linking

Enhancements When Adding a New Program Selection

If your application process includes the option of selecting and ranking multiple programs, we've made it easier to ensure that newly selected programs are always ranked and that any required fields for a newly selected program are highlighted for completion.

Adding and Ranking a New Program Selection

Email Notification Template Updates

In an effort to streamline your configuration and search efforts for email templates, we've added two tools to the email/text templates area. You can now make a copy of an email template to create a new version and you can hide the system-default templates to more easily locate email templates of your own creation.

And there's more to explore in Enroll 2.5, including:

- Field Settings: Required for Guardian, Required for Admin
- Annualize Global Tables: changes made in one year will no longer impact the configuration in other years for certain data elements
- Forgot Password SMS template enhanced
- Maintenance Items:
  - Saved Views Update: Filtering and Sort Data By
  - Filtering on "Promoted" and "Retained" Students
  - User Permission Update: Edit Students
  - Ranking New Applications After Having Withdrawn All Applications

In Case You Missed It...

On October 8, 2024, an Enroll maintenance release (2.4.4) was deployed that included the following items:

- Choice rank displays on application cards in the Student Profile
- Dropdown width corrected for Application filter by Form Process
- Rolled over waiting lists display on Lottery Lists page

2.4.4 Maintenance Release Notes

Pro Tip: To receive an email when new release notes are published, navigate to the Enroll Help Center, then "Releases" and click on the "Follow" button.
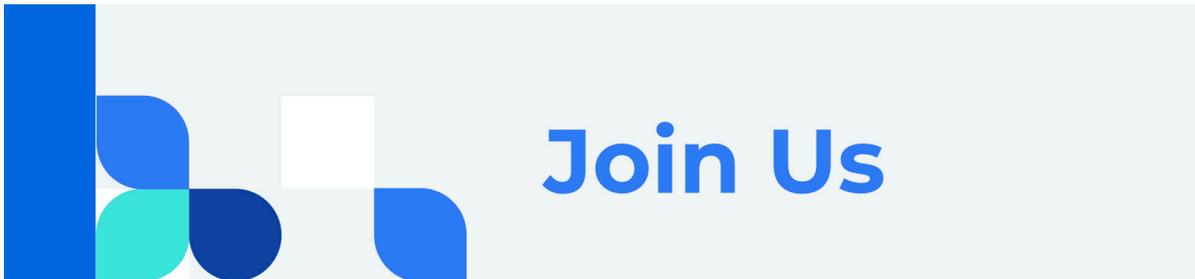

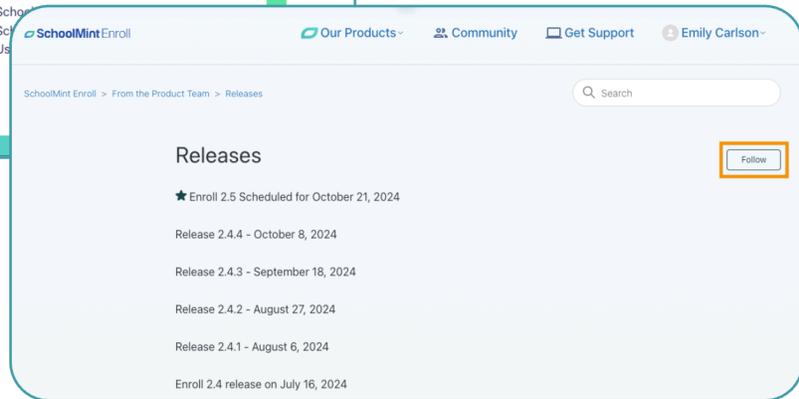

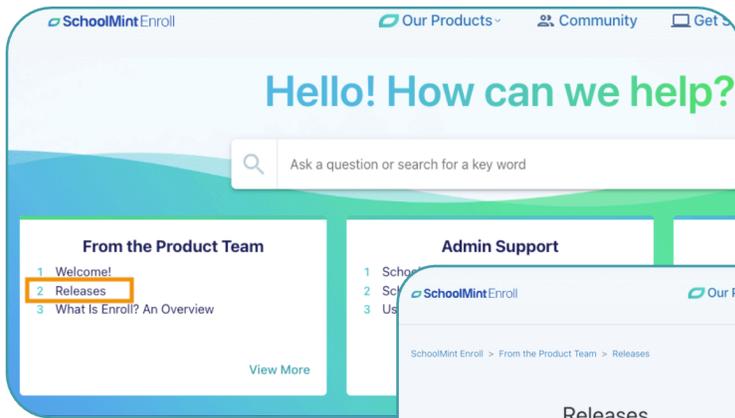

Level up your Enroll knowledge with Alexis Robin, our Enroll trainer extraordinaire! Sign up for one (or all) of the webinars below to finish the 2024 calendar year as a pro:

- November 7: Data Harmony: Navigating Sync Service Imports
- November 19: Re-enrollment Ready: Preparation Pro Tips
- December 12: Form Crafting: Elevating Re-enrollment

Looking for a specific topic? Need to train a new team member on Enroll? Recordings of past webinars are available in the Help Center here.

For questions on Enroll 2.5 or any other enrollment topics, our in-platform WalkMe assistant and our Technical Support team are here and happy to help!
